

Earthquake Safety When Outdoors

If you're outdoors during an earthquake, move to a clear area away from trees, signs, buildings, electrical wires and poles. Move away from buildings, street-lights, and utility wires. Once in the open, stay there until the shaking stops.

The greatest danger exists directly outside buildings, at exits, and alongside exterior walls. Many of the outdoor fatalities have occurred when people ran outside of buildings only to be killed by falling debris from collapsing walls. Ground movement during an earthquake is seldom the direct cause of death or injury. Most earthquake-related casualties result from collapsing walls, flying glass, and falling objects.

If you're driving, pull over to the side of the road and stop. Avoid overpasses, power lines, and other hazards. Stay inside the vehicle until the shaking is over. Stop as quickly as safety permits and stay in the vehicle.

Avoid stopping near or under buildings, trees, overpasses, and utility wires. Proceed cautiously once the earthquake has stopped. Avoid roads, bridges, or ramps that might have been damaged by the earthquake.
